**Subject: Supplemental Traffic Impact Analysis for the Proposed  
Philadelphia Street Industrial Center Project  
Chino, California**

Dear Mr. Liu:

Linscott, Law & Greenspan, Engineers is pleased to present the findings of this Supplemental Traffic Impact Analysis for the proposed Philadelphia Street Industrial Center Project (herein after referred to as “Project”) located on the northwest quadrant of East End Avenue and Philadelphia Street in the City of Chino, California. The Project site is currently located in the unincorporated area of San Bernardino County but will be annexed into the City of Chino as part of a larger ±53-acre annexation area request with LAFCO. Access to the Project site will be provided via one (1) unsignalized full access along Philadelphia Street, and one (1) unsignalized full access driveway and one (1) unsignalized right-in/right-out driveway along East End Avenue

This Supplemental Traffic Impact Analysis is generally consistent with and builds upon the approved Traffic Impact Analysis (TIA) prepared by LLG (dated February 22, 2021) and will satisfy the traffic impact requirements of the City of Chino. As requested by City Staff, the Supplemental Traffic Impact Analysis focuses to the collection of seven (7) days of vehicle classification counts consisting of autos, trucks (by classification), bikes, and pedestrians at four (4) study roadway segments in the vicinity of the Project site and includes the preparation of daily and peak hour capacity analysis at the four study locations for existing and Project completion conditions. Specifically, Supplemental Traffic Impact Analysis includes the following:

- Existing daily vehicle classification traffic counts (7 consecutive days),
- Estimated Project traffic generation/distribution/assignment (Passenger Car Equivalency),
- Daily roadway segment analyses for existing traffic conditions
- Daily roadway segment analyses for existing with Project traffic conditions

- AM peak hour and PM peak hour roadway segment analyses for existing traffic conditions,
- AM peak hour and PM peak hour roadway segment analyses for existing plus Project traffic conditions,
- Daily roadway segment analyses for Year 2025 without Project traffic conditions
- Daily roadway segment analyses for Year 2025 with Project traffic conditions
- AM peak hour and PM peak hour roadway segment analyses for Year 2025 without Project traffic conditions,
- AM peak hour and PM peak hour roadway segment analyses for Year 2025 with Project traffic conditions,

## PROJECT DESCRIPTION

The proposed Project will consist of three (3) warehouse buildings totaling 63,900 gross square footage (GSF) on the northwest quadrant of East End Avenue and Philadelphia Street. The Project site is currently located in the unincorporated area of San Bernardino County but will be annexed into the City of Chino as part of a larger ±53-acre annexation area request with LAFCO. The Project is anticipated to be completed by the Year 2022. It should be noted that the proposed Project is consistent with the County of San Bernardino General Plan land use and will continue to be consistent as part of the annexation into the City of Chino.

## EXISTING CONDITIONS

### Existing Traffic Volumes

Seven (7) days of daily roadway classification traffic counts were collected by Counts Unlimited from April 14, 2023 through April 20, 2023 consisting of autos, trucks (by classification), bikes, and pedestrians at four (4) study roadway segments in the vicinity of the Project site in order to develop the baseline peak hour traffic volume data for the passenger car equivalency (PCE) roadway segment analysis. The four (4) study roadway segments are listed as follows:

- 1) East End Avenue between Francis Avenue and Philadelphia Street
- 2) East End Avenue between Philadelphia Street and County Road
- 3) Philadelphia Street between Reservoir Street and East End Avenue
- 4) Philadelphia Street between East End Avenue and Roswell Avenue

**Table 1**, attached, presents a summary of the seven (7) days of daily vehicle classification traffic counts and details the passenger cars, 2-axle trucks, 3-axle trucks and 4+-axle trucks including conversion of the truck data into PCE data for each count day. In addition, the average PCE daily traffic volume is presented in the last column of *Table 1*. **Figure 1** illustrates the existing average actual and PCE daily traffic volumes at the four (4) study roadway segments. It should be noted that the 2-axle, 3-axle and 4+axles trucks were converted to passenger car equivalents (PCE) using a factor of 1.5 vehicles per truck, 2.0 vehicles per truck, and 3.0 vehicles per truck, respectively, based on City of Chino requirements. As shown in the last column of *Table 1* and *Figure 1*, the existing average daily PCE traffic volume on East End Avenue varies between 8,283 and 8,537 vehicles, while the existing average daily PCE traffic volume on Philadelphia Street varies between 6,629 and 7,203 vehicles. In addition as shown in *Table 1*, the peak daily traffic volume for each study roadway segment is highlighted in yellow, which will be utilized in the daily roadway segment level of service (LOS) analysis.

**Table 2**, attached, presents a summary of the seven (7) days of daily vehicle classification traffic counts on a peak hour directional basis and details the passenger cars, 2-axle trucks, 3-axle trucks and 4+-axle trucks including conversion of the truck data into PCE data for the peak hour of each count day. **Figure 2** and **Figure 3** illustrates the existing directional actual and PCE AM peak hour and PM peak hour traffic volumes at the four (4) study roadway segments. In addition as shown in *Table 2*, the AM and PM peak hour traffic volume for each study roadway segment is highlighted in yellow, which be utilized in the peak hour roadway segment level of service (LOS) analysis.

Pedestrian and bicycle traffic data was also collected between 6:00 AM and 8:00 PM on Tuesday (2/18/23) and Wednesday (2/19/23) and the following summarizes the average daily data for each study segment:

- *East End Avenue between Francis Avenue and Philadelphia Street (Segment No. 1): 20 Pedestrians; 12 Bicycles*
- *East End Avenue between Philadelphia Street and County Road (Segment No. 2): 62 Pedestrians; 23 Bicycles*
- *Philadelphia Street between Reservoir Street and East End Avenue (Segment No. 3): 20 Pedestrians; 32 Bicycles*
- *Philadelphia Street between East End Avenue and Roswell Avenue (Segment No. 4): 57 Pedestrians; 31 Bicycles*

This reflects a relatively low volume of pedestrian and bicycle traffic for a 14-hour period and the Project will provide sidewalks and roadway widening along the Project frontages to support and improve pedestrian and bicycle traffic flow in the area.

*Appendix A* contains the detailed traffic count sheets for the seven (7) days of daily roadway segment counts at the four (4) study locations, which included autos, trucks (by classification), bikes (2 days), and pedestrians (2 days).

## PROJECT TRAFFIC CHARACTERISTICS

### Project Trip Generation

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Generation equations and rates used in the traffic forecasting procedure are found in the 10<sup>th</sup> Edition of *Trip Generation*, published by the Institute of Transportation Engineers (ITE) [Washington D.C., 2017].

*Table 3* summarizes the trip generation rates used in forecasting the vehicular trips generated by the proposed Project and presents the forecast daily and peak hour traffic volumes for a “typical” weekday. As shown in the upper portion of *Table 3*, the trip generation potential for the proposed Project was estimated using the ITE Land Use 150: Warehousing trip rates. The upper portion of *Table 3* summarizes the trip generation rates used in forecasting the vehicular trips generated by the Project. The middle portion of *Table 3* summarizes the trip generation potential used in forecasting the vehicular trips, both autos and trucks, generated by the Project using recommended factors published in the *Truck Trip Generation Study – City of Fontana, August 2003*. Consistent with City of Chino requirements, passenger car equivalent (PCE) factors have been utilized due to the expected heavy truck component of the Project uses. A PCE factor of 1.5, 2.0, and 3.0 has been applied to large 2-axle, 3-axle, and 4+-axle trucks, respectively.

Review of the lower portion of *Table 3* shows that the proposed Project is forecast to generate 177 daily PCE trips (one half arriving, one half departing), with 39 PCE trips (30 inbound, 9 outbound) produced in the AM peak hour and 43 PCE trips (13 inbound, 30 outbound) produced in the PM peak hour. It should be noted that these estimates include the conversion of truck-related trips to passenger car equivalents (PCE).

### Project Trip Distribution and Assignment

The directional traffic distribution pattern for the proposed Project is consistent with patterns contained in the approved LLG TIA (02.22.21). Project traffic volumes both

entering and exiting the site have been distributed and assigned to the adjacent street system based on the following considerations:

- the site's proximity to major traffic carriers and regional access routes,
- expected localized traffic flow patterns based on adjacent street channelization, and presence of traffic signals,
- existing traffic volumes, and
- ingress/egress availability at the Project site.

## FUTURE TRAFFIC CONDITIONS

### Existing Plus Project Traffic Volumes

The Existing plus Project traffic conditions have been generated based upon existing conditions and the estimated Project traffic. These forecast traffic conditions have been prepared pursuant to the City's requirement, which requires that the potential impacts of a Project be evaluated upon the circulation system, as it currently exists. This traffic volume scenario and the related analysis will identify the roadway improvements necessary to offset the direct traffic impacts of the Project, if any.

**Figure 4** presents the projected actual and PCE Daily traffic volumes at the key study roadway segments with the addition of the trips generated by the proposed Project to existing Daily traffic volumes, while **Figure 5** and **Figure 6** presents the projected actual and PCE AM and PM peak hour traffic volumes at the key study roadway segments with the addition of the trips generated by the proposed Project to existing peak hour traffic volumes.

### Year 2025 Traffic Volumes

Horizon year, background traffic growth estimates have been calculated using an ambient growth factor and future cumulative projects in the study area consistent with the cumulative Projects list contained in the approved LLG TIA (02.22.21) plus the proposed CarMax Auto Auction to be located on the southwest quadrant of East End Avenue and Francis Avenue. The ambient growth in traffic volumes has been calculated at two percent (2.0%) per year. Applied to existing Year 2023 traffic volumes results in a four percent (4.0%) growth in existing volumes to future horizon year 2025.

**Figure 7** presents the Year 2025 without Project actual and PCE Daily traffic volumes at the key study roadway segments, while **Figure 8** and **Figure 9** presents the Year 2025 without Project actual and PCE AM and PM peak hour traffic volumes at the key study roadway segments.

**Figure 10** presents the Year 2025 with Project actual and PCE Daily traffic volumes at the four (4) key study roadway segments, while **Figure 11** and **Figure 12** presents the Year 2025 with Project actual and PCE AM and PM peak hour traffic volumes at the four (4) key study roadway segments.

## EXISTING PLUS PROJECT CAPACITY ANALYSIS

**Table 4** summarizes the Daily roadway segment level of service results at the four (4) key roadway segments for existing traffic conditions without and with the Project. The first column (1) shows the existing LOS “E” capacity and the second column (2) shows the number of lanes. The third column (3) presents a summary of Existing Daily traffic conditions and the fourth column (4) lists Existing with Project Daily traffic conditions, while the fifth column (5) shows the increase in V/C ratio value due to the added Daily Project trips and indicates whether the traffic associated with the Project will result in an adverse level of service based on the City’s LOS standard for roadway segments.

**Table 5** summarizes the AM and PM peak hour roadway segment level of service results at the four (4) key roadway segments for existing traffic conditions without and with the Project. The first column (1) shows the total link capacity per direction and the second column (2) presents a summary of Existing Daily traffic conditions while the third column (3) lists Existing with Project AM and PM peak hour traffic conditions, which shows the increase in V/C ratio value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will result in an adverse level of service based on the City’s peak hour standards for roadway segments.

### Existing Traffic Conditions

Review of column (3) of **Table 4** indicates that all four (4) key roadway segments currently operates at acceptable levels of service on a daily basis when compared to the City’s LOS standards. In addition, review of column (2) of **Table 5** indicates that all four (4) key roadway segments currently operates at acceptable levels of service on a peak hour basis when compared to the City’s LOS standards.

### Existing With Project Traffic Conditions

Review of columns (4) and (5) of **Table 4** indicates that for Existing With Project traffic conditions, all four (4) key study roadway segments are forecast to operate at acceptable levels of service on a daily basis when compared to the City’s LOS standards with the addition of Project generated traffic to existing traffic. In addition, review of column (3) of **Table 5** indicates that for Existing With Project traffic conditions, all four (4) key roadway segments are forecast to operate at acceptable

levels of service on a peak hour basis when compared to the City's LOS standards with the addition of Project generated traffic to existing traffic.

## YEAR 2025 CAPACITY ANALYSIS

**Table 6** summarizes the Daily roadway segment level of service results at the four (4) key roadway segments for Year 2025 traffic conditions without and with the Project. The first column (1) shows the existing LOS "E" capacity and the second column (2) shows the number of lanes. The third column (3) presents a summary of Existing Daily traffic conditions and the fourth column (4) lists Year 2025 Without Project Daily traffic conditions, while the fifth column (5) lists Year 2025 With Project Daily traffic conditions. Column (6) shows the increase in V/C ratio value due to the added Daily Project trips and indicates whether the traffic associated with the Project will result in an adverse level of service based on the City's LOS standard for Daily roadway segment conditions.

**Table 7** summarizes the AM and PM peak hour roadway segment level of service results at the four (4) key roadway segments for Year 2025 traffic conditions without and with the Project. The first column (1) shows the total link capacity per direction and the second column (2) presents a summary of Year 2025 Without Project AM and PM peak hour traffic conditions while the third column (3) lists Year 2025 With Project AM and PM peak hour traffic conditions, which shows the increase in V/C ratio value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will result in an adverse level of service based on the City's LOS standard for peak hour roadway segment conditions.

### Year 2025 Without Project Traffic Conditions

Review of column (4) of **Table 6** indicates that for Year 2025 Without Project traffic conditions, all four (4) key roadway segments are forecast to operate at acceptable levels of service on a daily basis when compared to the City's LOS standards. In addition, review of column (2) of **Table 7** indicates that all four (4) key roadway segments are forecast to operate at acceptable levels of service on a peak hour basis under Year 2025 Without Project traffic conditions when compared to the City's LOS standards.

### Year 2025 With Project Traffic Conditions

Review of columns (5) and (6) of **Table 6** indicates that for Year 2025 With Project traffic conditions, all four (4) key study roadway segments are forecast to operate at acceptable levels of service on a daily basis when compared to the City's LOS standards with the addition of Project generated traffic to Year 2025 background traffic. In addition, review of column (3) of **Table 7** indicates that for Year 2025 With Project traffic conditions, all four (4) key roadway segments are forecast to

operate at acceptable levels of service on a peak hour basis when compared to the City's LOS standards with the addition of Project generated traffic to Year 2025 background traffic.

## CONCLUSION

- The Philadelphia Street Industrial Center Project applicant is proposing to construct three (3) warehouse buildings totaling 63,900 gross square footage (GSF) on the northwest quadrant of East End Avenue and Philadelphia Street. The Project site is currently located in the unincorporated area of San Bernardino County but will be annexed into the City of Chino as part of a larger ±53-acre annexation area request with LAFCO. The Project is anticipated to be completed by the Year 2025. It should be noted that the proposed Project is consistent with the County of San Bernardino General Plan land use and will continue to be consistent as part of the annexation into the City of Chino.
- The proposed Project is forecast to generate 177 daily PCE trips (one half arriving, one half departing), with 39 PCE trips (30 inbound, 9 outbound) produced in the AM peak hour and 43 PCE trips (13 inbound, 30 outbound) produced in the PM peak hour.
- The proposed Project will not adversely impact any of the four (4) key study roadway segments on a daily or peak hour basis when compared to the City of Chino LOS standards (LOS D). In addition, the Project will generate nominal pedestrian and bicycle traffic, but will provide sidewalks and roadway widening along the Project frontages to support and improve pedestrian and bicycle traffic flow in the area.

We appreciate the opportunity to provide this Supplemental Traffic Impact Analysis for the proposed Philadelphia Street Industrial Project. If you have any questions regarding this letter, please do not hesitate to call us at (949) 825-6175.

Very truly yours,

**Linscott, Law & Greenspan, Engineers**

<b>PCE Project Trip Generation Forecast</b>	<b>177</b>	<b>30</b>	<b>9</b>	<b>39</b>	<b>13</b>	<b>30</b>	<b>43</b>

**Notes:**

- TE/TSF = Trip End per 1,000 Square Feet of Gross Floor Area

<sup>1</sup> Source: Trip rates based on *Trip Generation, 11th Edition, Institute of Transportation Engineers (ITE), Washington, D.C. (2021)*. Recommended mix of traffic, including mix of 2-axle, 3-axle and 4-axle trucks, based on *Truck Trip Generation Study – City of Fontana, August 2003* average rate used.

<sup>2</sup> Based on ITE Warehouse land use Code 150 trip generation equation:

- Daily:  $T = 1.58(S) + 38.29$
- AM peak hour:  $T = 0.12(S) + 23.62$
- PM peak hour:  $T = 0.12(S) + 26.48$

<sup>3</sup> All 2-axle, 3-axle and 4+axles trucks converted to passenger car equivalents using a factor of 1.5 vehicles per truck, 2.0 vehicles per truck, and 3.0 vehicles per truck, respectively.

**TABLE 4**
